EDUCATION

Undergraduate student in Computer Engineering, **ITA** – Aeronautics Institute of Technology

2023 – 2027

Relevant Coursework:

- Algorithms and Data Structures
- Software Engineering and Architecture
- Backend/Full-Stack Development

PERSONAL PROJECTS

Zipr – URL Shortener (SaaS)

github.com/jatizon/zipr

Backend for a URL shortening service built with TypeScript and Fastify, using Base62 short codes generated from database IDs. Implemented a three-level cache-aside strategy (in-memory LRU → Redis → database) to optimize redirect flows, along with JWT authentication and Redis-based rate limiting. Containerized with Docker and Nginx as a reverse proxy, with unit and integration tests, health checks, and a GitHub Actions CI pipeline.

Stack: TypeScript, Node.js, Fastify, Prisma, SQLite, Redis, Docker, Nginx, GitHub Actions

EXPERIENCE

Junior Automation Engineer – NG.CASH

2026

Developed software and automation solutions for internal processes, focusing on building robust and reusable solutions to real-world business problems. Worked primarily with Python, system and API integrations, data processing, and internal tooling, applying software engineering practices such as modularization, testing, version control, and code organization to improve solution reliability and maintainability.

Software Engineering Intern – Kinea Investimentos (Itaú Unibanco Group)

2025 – 2026

Developed a Python pipeline to automate the monthly review of ~200 fund reports, replacing a recurring manual process. Extracted and validated data from PDFs using the Azure Document Analyzer API, with Blob Storage uploads and remote job orchestration. Integrated LLM APIs and validation rules to ensure consistency across Private Equity, Risk, and previous-month report data, significantly reducing operational time and human errors.

Teaching Assistant – Algorithms and Data Structures, ITA

2025

Worked as a teaching assistant for the course, developing automation tools for laboratory grading. Implemented Python scripts to analyze student submissions, handle recurring errors, and automatically verify results, reducing grading time and improving process reliability.

Summer Intern – EMS

2025

Worked in the Intelligence, Pricing, and Performance team, developing a prototype algorithm to convert monthly sales targets for individual medications into KPI targets for each point of sale. Processed and manipulated datasets using R and SQL, providing quantitative support for commercial decision-making.

ACHIEVEMENTS

- Ranked 7th among 141 students at ITA, with a final average of 9.301.
- Bronze Medalist at the 2022 International Physics Olympiad (IPhO).
